Modeling Human Behavior for AGI Systems - Free Agent Architecture

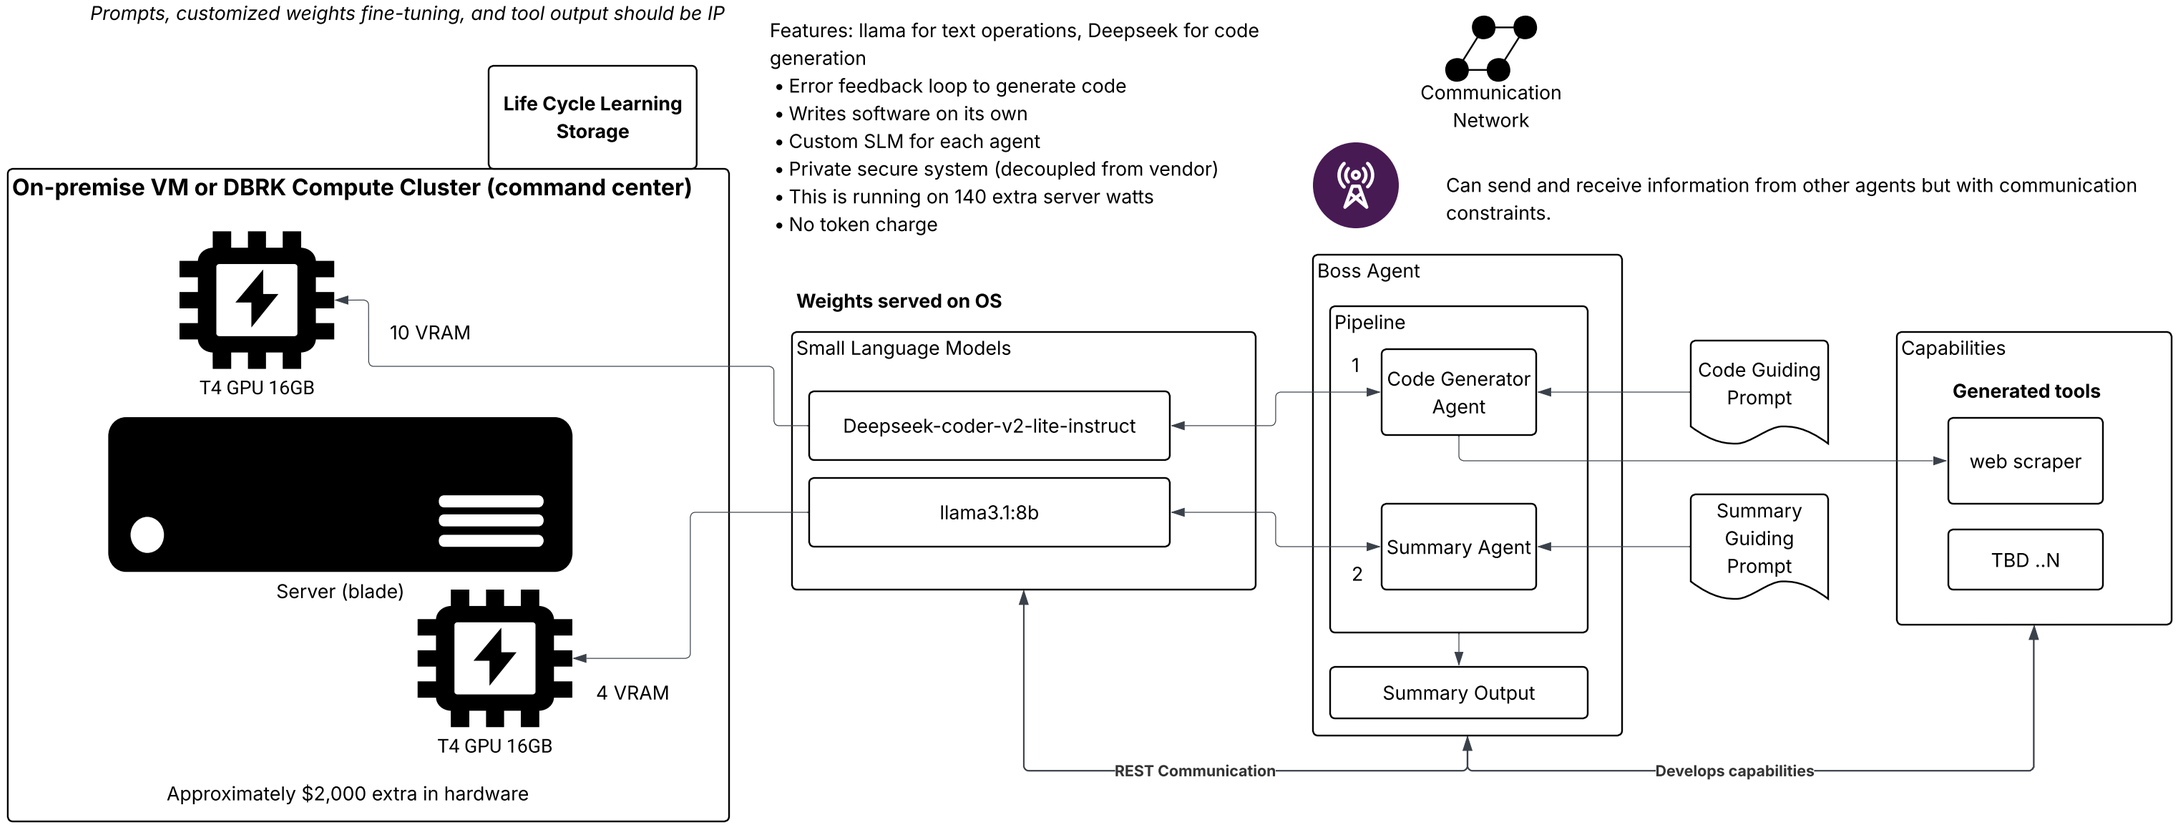

The next Turing test evaluating AGI is when a human does not question the results -
Thomas Bales, 2025

AGI is Today. Why wait, just boss it out!

- ***Swarm intelligence is real and we have the sme agents to do this.***
- ***Note: Some spanws or other agents may have other AI/ML specialties like RL or trainable small DNNS.***

Boss Agent - multi-agent with separation of concerns (Micro-AGI software engineering)

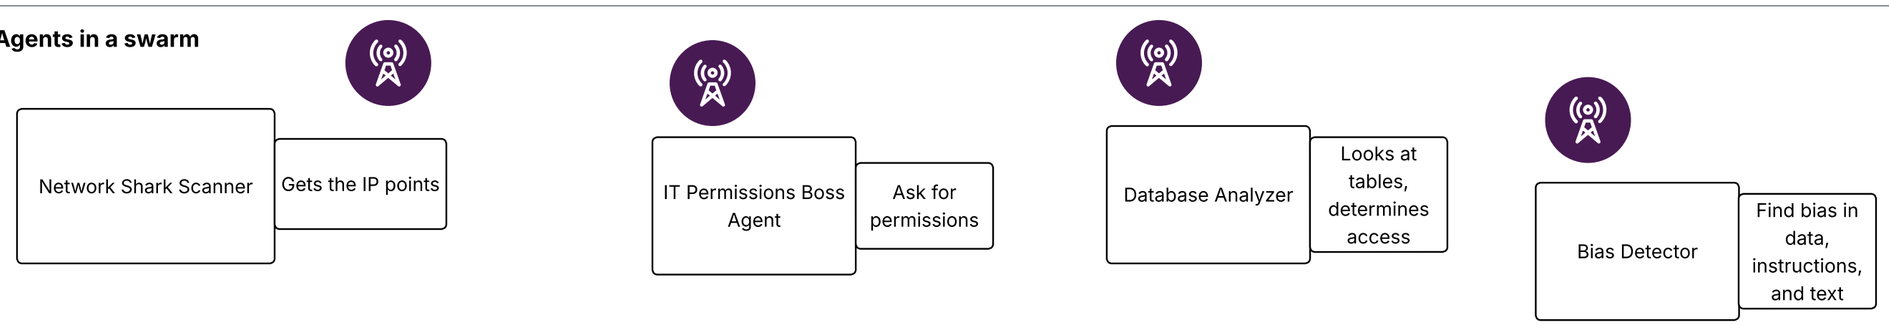

Prompts, customized weights fine-tuning, and tool output should be IP

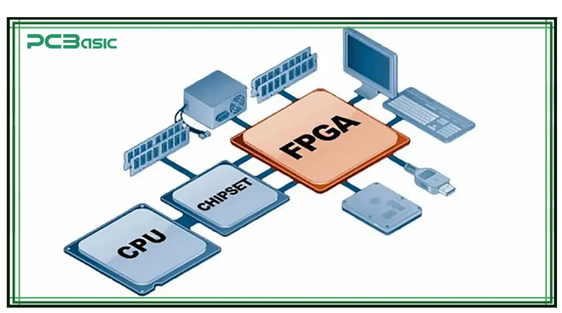

"Battleship Agent Class - can create its tools for a job with limited human instructions"

The K8 determines the operating constrains

Example Boss Agents in a swarm

Future possibilities -- No OS.

May have a use case for even lower energy consumption with MicroBlaze running at a 5w max.
